The Most Secure NAS on the Market

Buffalo TeraStations are the most secure NAS on the market, with built-in security features such as drive encryption, two-factor authentication, and a closed system to mitigate ransomware. TeraStations also offer a myriad of back up and recovery features to safeguard data and provide maximum uptime.

A CLOSED SYSTEM
All TeraStation NAS incorporate a Closed Operating System to eliminate the most common avenue for ransomware: 3rd-party apps.

ROBUST SECURITY
TeraStation NAS come with two-factor authentication to ensure login security. TeraStations also offer AES-256 encryption that covers data both at rest and in transfer. TeraStation encryption locks the HDD to the individual NAS chassis to prevent data from being accessed if HDDs are removed.

SECURE & FLEXIBLE BACKUPS
TeraStations offer numerous backup options that enable bi-directional data replication and cloud synchronization without additional licensing fees from Buffalo. Select TeraStation models also offer snapshots.

MADE IN JAPAN / TAA

Buffalo's TAA-compliant products are manufactured in Japan and have been approved to be acquired by the US Government for use.
