DREAM MACHINE PRO VS THE CLOUD KEY GEN2 PLUS

While both UniFi consoles run all of UniFi's software (Network, Protect, Access, Talk, UID), the key differences between the console units is in the storage and additional functionality.

Functionality

The Dream Machine Pro is an all-in-one network device performing as a router, firewall, switch and network controller. The cloud key gen2 plus is only a network controller.

Storage

The cloud key gen2 plus has a 2.5" hard drive bay and comes pre-installed with a 1TB hard drive with expandable option up to 5TB. The Dream Machine Pro has a 3.5" hard drive bay with hard drives that need to be purchased separately.
