# Kensington®

Protect Patient Information with Ease

Control what you want to show, when you want to show it

While cyberhacking and hardware theft are risks that many healthcare industries are addressing, visual hacking is also a threat that is often over-looked. A study by Ponemon Institute found that visual hacking goes unnoticed 70% of the time and has an 88% success rate. That's huge!

Kensington understands that having a screen stuck to the monitor is not always ideal, especially in those situations where a patient needs to see information. That's why we're proud to introduce our MagPro™ Privacy Screen family. No more sticky messes and more control over what is seen, when it needs to be.
