

# The Liebert® GXT5 15-20kVA UPS Battlecard against APC

Defend Against

Feature	Smart-UPS Online (SRT)	Vertiv™ Liebert® GXT5	Differentiation
Automatic restart of loads after UPS shutdown	✓	✓	The GXT5 also provides automatic restart of the UPS, and the GXT5 allows the user to turn this feature on or off.
Hot-swappable batteries	✓	✓	The internal battery packs in every GXT5 UPS are also hot-swappable.
Intelligent battery management	✓	✓	"Intelligent" battery management is typical among all UPS systems in this category and is simply referring to how battery charging is controlled. APC ultimately claims that this maximizes the life of the battery, but Vertiv offers a 3 year factory warranty on the batteries while APC only offers a 2 year warranty.
Scalable Runtime	✓	✓	The GXT5 UPS also supports scalable runtime via external battery cabinets with auto-detect. The GXT5 15 and 20kVA UPS support up to 10 pairs (20 total) 288V External Battery Cabinets for extended runtime applications
Automatic Internal Bypass to supply utility power in the event of UPS overload or fault	✓	✓	The GXT5 UPS includes this feature. In the unlikely event of a UPS failure from overload, over-temperature, etc. the GXT5 automatically transfers the connected load to bypass to ensure power continuity.
Generator compatible	✓	✓	This is common among online double-conversion UPS's, and the GXT5 is no exception. The quality of output power coming from backup generators is not good enough to supply directly to sensitive IT equipment. Anytime a facility has a backup generator an online double-conversion UPS should be used instead of line-interactive and/or standby UPS's.
Cold-start capable	✓	✓	If utility power fails and the batteries are charged, The GXT5 UPS can be cold-started in battery mode.
